

Project Documentation Phase

The **Project Documentation Phase** is the final and important stage of the **EduGenie – Google Gemini Powered Learning Assistant** project. In this phase, all information related to the project is collected, organized, and presented in a proper format. Documentation helps explain how the project was planned, developed, tested, and implemented.

1. Purpose of Documentation

The main purposes of project documentation are:

- To provide complete information about the project.
- To explain the system design and development process.
- To record the technologies and tools used.
- To describe the testing process and results.
- To make the project easy to understand and maintain.

2. Project Report

A project report is prepared with different chapters and sections. It may include:

1. Introduction
2. Problem Statement
3. Objectives
4. Brainstorming and Ideation
5. Requirement Analysis
6. Project Planning
7. Project Design
8. Project Development
9. Project Testing
10. Results and Discussion
11. Conclusion
12. Future Enhancements
13. References

3. Technical Documentation

Technical details of the system are documented, including:

- System architecture
- System workflow

- Module descriptions
- Database design
- Technologies used
- Google Gemini API integration
- Software and hardware requirements

This information helps developers understand how the system works.

4. User Documentation

User documentation explains how students can use EduGenie. It can include:

- How to open the application
- How to enter a question
- How to submit a doubt
- How to read the AI-generated response
- How to continue a conversation
- How to view previous conversations, if available

5. Testing Documentation

The testing results are recorded to show that the application has been checked properly.

It includes:

- Test cases
- Expected results
- Actual results
- Errors identified
- Corrections made
- Final testing results

6. Screenshots and Diagrams

Important screenshots of the application are included in the documentation. Diagrams such as the **system architecture, workflow, flowchart, and database design** can also be added to make the project easier to understand.

7. Future Enhancements

Possible future improvements are also documented, such as:

- Voice-based doubt solving
- Support for more languages
- Image-based question solving

- Personalized learning recommendations
- Improved conversation history
- Additional educational features

8. Expected Outcome

The Project Documentation Phase provides a complete record of the **EduGenie project**, from initial idea to final implementation. Proper documentation makes the project easier to understand, evaluate, maintain, and improve in the future.
