

Project Demonstration Phase

The **Project Demonstration Phase** is the stage where the completed **EduGenie – Google Gemini Powered Learning Assistant** is presented to teachers, evaluators, or users. The main purpose of this phase is to demonstrate the working features of the project and explain how the system solves students' learning problems.

1. Preparation for Demonstration

Before the demonstration, the project is checked to ensure that all major features are working properly. The required software, internet connection, API connection, and project files are prepared.

2. Introduction of the Project

The demonstration begins with a short introduction about **EduGenie**. The problem statement, objectives, and importance of the project are explained.

The presenter explains that EduGenie is an AI-powered learning assistant designed to help students clear academic doubts and understand difficult concepts.

3. Demonstration of Features

The major features of the application are demonstrated step by step:

- Opening the EduGenie application.
- Showing the home or login page.
- Entering an academic question.
- Sending the question to the AI system.
- Showing the response generated through Google Gemini.
- Asking follow-up questions.
- Demonstrating different types of academic queries.
- Showing conversation history, if available.

4. System Workflow Demonstration

The working process is explained as:

Student → Enters Question → EduGenie → Google Gemini API → AI Processing → Generated Answer → Student

This demonstrates how the different components of the system work together.

5. Explanation of Technologies

The technologies used in the project are briefly explained, such as:

- HTML, CSS, and JavaScript for the user interface.
- Python or another backend technology for application processing.
- Google Gemini API for AI-based responses.
- Database technology for storing information, if included.

6. Results and Feedback

During the demonstration, the system's responses and features are shown to the evaluators. Their feedback and suggestions can be collected to identify areas for future improvement.

7. Final Presentation

The project team explains the main achievements, limitations, and future enhancements of EduGenie. Questions from the evaluators are answered based on the project implementation.

8. Expected Outcome

The Project Demonstration Phase helps prove that **EduGenie is a working AI-based learning assistant**. It provides an opportunity to show the project's functionality, explain its technical implementation, and demonstrate how it can support students in solving their academic doubts.
